IEOR E4004: Optimization Models and Methods
Your Name:

In Class Exercise

Using the example introduced in **"IEOR4004_SolvingIPs.pynb"**, recreate the **Branch and Bound tree** for the problem. At each node of the tree, use the boxes below to record:

- the **additional constraint introduced by branching**,
- the **optimal objective value** *z*of the LP relaxation at that node, and
- the **resulting values of the decision variables**.
